AI Ethics & Responsible Usage Declaration

I hereby declare that:

- The dataset used in this assignment is properly cited and ethically sourced.
- I have analyzed potential biases present in the dataset and model.
- I have considered privacy implications related to the data used.
- I understand the responsible and ethical usage of the developed system/model.
- This work adheres to institutional guidelines on ethical AI practices.

Dataset Details:

Source: NSE India - National Stock Exchange (www.nseindia.com)

Type of Data: Historical Daily Stock Price Data (BAJAJ-AUTO, NSE)

Contains Personal/Sensitive Data? (Yes/No): No

If Yes, describe anonymization steps: N/A (Data is publicly available)

Identified Bias (if any):

The ARIMA model is based on past values, so it keeps going, but it gets stuck when something unexpected happens, like big news about a company, an announcement about the government's budget, or a sudden market crash. I saw that the predicted values were very close to the most recent prices, which means that the model is strongly affectd by the most recent data points. ARIMA is based on the idea that past patterns will continue in the future. However, this isn't always true in real stock markets, where conditions can change..

Responsible Usage Statement:

I made this model only for my college assignment, and not to make real investment choices. There are a lot of things that affect stock prices that a simple ARIMA model can't fully capture. The information I used is I haven't used any private or personal information in this project, and the NSE India website has all the information I need.

Student Details:

Student Name: JAMADAR SHOAIB ANWAR

UIN: 231A008

Course: Data Analytics and Visualization (CSC601) - TE AI&DS Sem VI

Date: 17/03/2026

Signature:
